RUSSELL LOWE

1. Draw a series of 3 parallel projections exploring the interconnection between pairs of your drawings from week one (make sure that each one of the pair is from a different client). Use carefully hatched lines to highlight one set of surfaces that exist in parallel planes.
2. Draw the same set of 3 parallel projections from the opposite angle.
3. In the second set of 3 parallel projections, from step 2, imagine one of the two blocks is a structure that you use to form a 3d curving surface around (as if you were going to "subdivide and smooth" it using the Artisan Tools in SketchUp). Draw curving lines over the geometry to indicate its new form. On the geometry that remains rectilinear use carefully hatched lines to highlight one set of surfaces that exist in parallel planes.

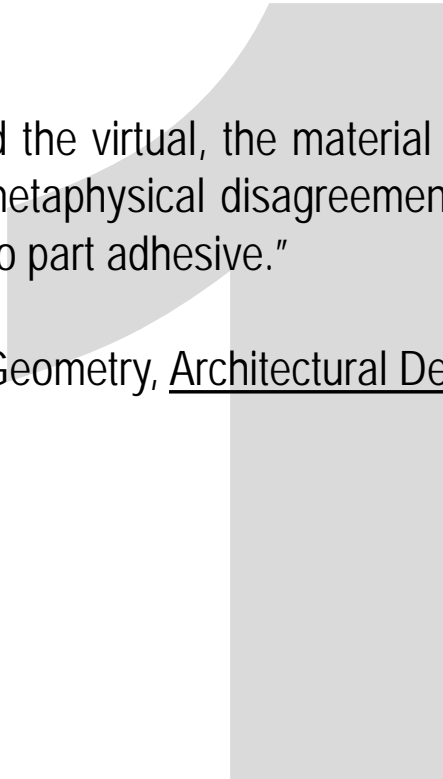

Note: throughout the class students will be exporting objects from SketchUp to Lumion.

“Why still speak of the real and the virtual, the material and immaterial? Here these categories are not in opposition, or in some metaphysical disagreement, but more in an electroliquid aggregation, enforcing each other, as in a two part adhesive.”

ARALDITE® GLOBAL TECHNOLOGY AND INNOVATION

Neutelings and Riedijk *ON laziness recycling sculptural mathematics & ingenuity*.
El croquis 94. (Main Library Level 9 720.5/121)

"Laziness, one of the seven cardinal sins, is one of (a designers) most useful characteristics. The combination of diligence and ambition is highly dangerous; the combination of laziness and ambition ensures a pleasing balance, which often leads to happy results because compensating for laziness requires the application of ingenuity."

Make the Commission Go Away.

Recycle Buildings.

Recycling Typologies and Concepts.

Sculptural Mathematics: "The most exhausting sort of design process is one in which each version requires a conscious decision. We therefore make it our practice to start off with a simple basic mathematical concept within which the program is to be organized."

Compulsory Laziness enforces Ingenuity (66% vs 33% tare space).

Conclusion: "... no matter how successful it might be as a method, (laziness) still has a great disadvantage: it requires a lot of effort."

RICKY FAN

ARCH 1101 EXP2 2010 designed by Ricky Fan
The moodboard of the concept

The inspiration of the architecture form

I take effort to create
the architecture combining
gradually with the environment

Meeting place:

For the aim of exchanging ideas, I create a space which is the fusion of the sky and earth; the mergence of the horizon and ground surface.

(The space seems to become 'no boundary')

S.H.'s Lab:

The idea of this space is 'undefine space', in general, the space is comprised from dot to line, from line to surface. But according to S.H.'s 'no boundary' idea, I make a bold assumption and create an experience of 'imaginative space'.

The pattern is supporting this idea

C.D.'s Lab:

'Evolution' is C.D.'s great attainment. The key value of this space are 'intersection', 'chain', 'growth' and 'unlimited'.

RICKY FAN

The moodboard of the concept

Stephen Hawking's space

Universe No-Boundary
Invisible Form
Life Empty Love
Peace Time Strong Nature
Undefined horizon
Twist Wisdom

"...But if the universe is really completely self-contained, having no boundary or edge, it would have neither beginning nor end: it would simply be... What place, then, for a creator?"

The intersection of their ideas

Branch Growth
Natural Selection Wisdom
Time Human
Weak
Intersection Strong
Life Evolution Relationship
Nature

Charles Darwin's space

"...under the complex and sometimes varying conditions of life, will have a better chance of surviving, and thus be naturally selected."

RICKY FAN

BRYAN NGUYEN

The texture I choosed was three texture from one group, light to dark. And since the structural wall was main support, I used the darkest texture to show the high density and stable. Use the same reason, the secondary wall used the medium texture. And the roof was used the lightest one.

MARIA AGNESI'S LABORATORY

The hypothesis I selected was 'Agnesi's knowledge of multiple languages helped connect all the different facets of her life.' So in my opinion, the Maria's success was based on her different knowledges. And her knowledges support her researchs and achievements. In the architecture, the knowledges can be instead of the column other structural wall. Therefore I design a space which was support by the column and wall and easily saw the structure from the outside.

SIGMUND FREUD'S LABORATORY

The hypothesis I selected was 'Sigmund Freud developed the theory of human mind's organization and internal operations.' That was absolutely different from the Maria's laboratory. The Sigmund look more care the about inside of body. Although the mind was complex, he still could read your mind clearly. So I used the very simple entrance and complex inside space. But you can see through the building by the central hole cross the space. And space was separate by two parts, private inside and public corrida. And the texture I selected was concrete with cool color to show the space hermetic and separate from the maria's laboratory.

WEN JUN HU

1. Draw a series of 3 parallel projections exploring the interconnection between pairs of your drawings from week one (make sure that each one of the pair is from a different client). Use carefully hatched lines to highlight one set of surfaces that exist in parallel planes.
2. Draw the same set of 3 parallel projections from the opposite angle.
3. In the second set of 3 parallel projections, from step 2, imagine one of the two blocks is a structure that you use to form a 3d curving surface around (as if you were going to "subdivide and smooth" it using the Artisan Tools in SketchUp). Draw curving lines over the geometry to indicate its new form. On the geometry that remains rectilinear use carefully hatched lines to highlight one set of surfaces that exist in parallel planes.

Note: throughout the class students will be exporting objects from SketchUp to Lumion.
